

$$316x = -5$$

$$4.) \quad) = 24$$

$$8.) \quad (x+8)(x-3) = -30$$

$$9.) \quad (2x+3)(x-3) = -7$$

$$10.) \quad 2x(4x+5) = -8$$

By quadratic formula:

$$1.) \quad x$$

$$^2 + 3x + 4 = 0$$

$$2.) \quad 2x^2 - x - 5 = 0$$

$$3.) \quad 4x^2 + 3x + 7 = 0$$

$$4.) \quad x + \frac{8}{x} + 1 = 0$$

By completing the square:

$$1.) \quad x^2 + 4x + 1 = 0$$

$$2.) \quad x^2 - 3x + 1 = 0$$

$$3.) \quad 2x^2 - 4x + 5 = 0$$

$$4.) \quad 3x^2 + 5x - 2 = 0$$

By completing the square:

$$1.) \quad x^2 + 4x - 5 = 0$$

$$2.) \quad x^2 - 3x + 1 = 0$$

$$3.) \quad 2x^2 + 4x - 1 = 0$$

$$4.) \quad 2x^2 + 2x + 5 = 0$$

$$5.) \quad 3x^2 - 6x = 8$$

$$6.) \quad 3x^2 + 5x = 2$$
